

Hello,

As one of the world's leading quantitative research teams, the Quantitative Research team is responsible for all quantitative developments for the BNP Paribas Global Markets division.

As part of our internship recruitment campaign for 2019, we are organizing a two-day event in Paris, including:

- a 2-hour written test on **Monday 21st October 2019 at 8.30 AM**
- interviews for candidates who successfully complete the test on **Monday 21st October 2019** (afternoon) and **Tuesday 22nd October 2019**.

Our target profiles reflect the wide range of technical skills that are covered by the quant teams:

- Mathematics: Stochastic calculus / Numerical analysis / Statistics
- Computer science: Object oriented programming / Databases / Signal processing
- Machine learning / Big Data: Data analysis and visualization

These internships are a unique opportunity to bridge the gap between theory and practice with a recognized leader in the financial industry.

Note that some of the internships do not require a formal training in financial mathematics: very strong profiles in computer science will be considered as well.

Due to the limited number of available places for the written test, we will make a pre-selection of students based on an online coding test. Links to the coding test will be sent on the **7th October** and candidates will have a **one week** window to complete it.

We would therefore be grateful if you could forward this email to your 3A/Master/PhD students for them to apply [here](#) by sending their CVs.

Best Regards,

Quantitative Research
